

⚙️ Git Configuration :

```
git config --global user.name "your name"
git config --global user.email "your-email@example.com"
git config --global --list # View all configuration settings
```

★ Start a new repo :

```
git init
```

Check what you added :

```
git status
```

Add untracked file or unstaged changes :

```
git add <file>
git add . # All untracked files and unstaged changes
```

📝 Make a commit :

```
git commit -m "Your Message"
```

Check status + Stage + Commit

```
git status
git add . # Stage all changes
git commit -m "Your Message"
```

📖 Git Log / History :

```
git log # Show full commit history
git log --oneline # Show commit history in condensed format
git log --all --graph --oneline # Show all branches with graph
```

🔗 Git Clone :

```
git clone <url> # Downloading(cloning) a repository
git clone https://github.com/ITSIG-TP/Git26-Git-Workshop.git
```

📦 Git Push :

```
# First push to a new branch (sets upstream)
git push -u <con_name> <branch_name>
git push -u origin main
# Subsequent pushes
git push <con_name> <branch_name>
git push origin main
```

🌳 Git Branches :

```
git branch # List all local branches
git branch <branch_name> # Create a new branch
git checkout <branch_name> # Switch to a branch
git checkout -b <branch_name> # Create + switch

git branch -d <branch_name> # Safe delete (only if merged)
git branch -D <branch_name> # Force delete (even if unmerged)

git branch -M main # Rename current branch to 'main'
```

☁️ Git Remote :

```
git remote -v # List all remote connections with URLs
git remote add <conn_url> # Add a new remote connection
git remote add origin https://github.com/ITSIG-TP/Git26-Git-Workshop.git
```

📦 Git Fetch, Merge and Pull :

```
git fetch # Fetch updates from all remotes
git fetch <conn_name> # Fetch updates from specific remote
git merge # Merge branches
git merge <conn_name>/<branch_name>
# Merge <branch_name> from <conn_name>

git pull # Fetch and merge in one command
```
