

ITSIG Git Workshop

Installation Guide

Created by: Information Technology Student Interest Group

First off, you need to have a GitHub account. We recommend you follow this video for registering a GitHub account.

<https://www.youtube.com/watch?v=0mxErQR3eVQ>

Required Software: Git and VSCode

Installing Visual Studio Code

If you have VSC installed already, you can skip this step.

1. Install the installer based on your Operating System from:

<https://code.visualstudio.com/download>

Download Visual Studio Code
Free and built on open source. Integrated Git, debugging and extensions.

Windows, Linux (Tux penguin), Mac

↓ Windows
Windows 10, 11

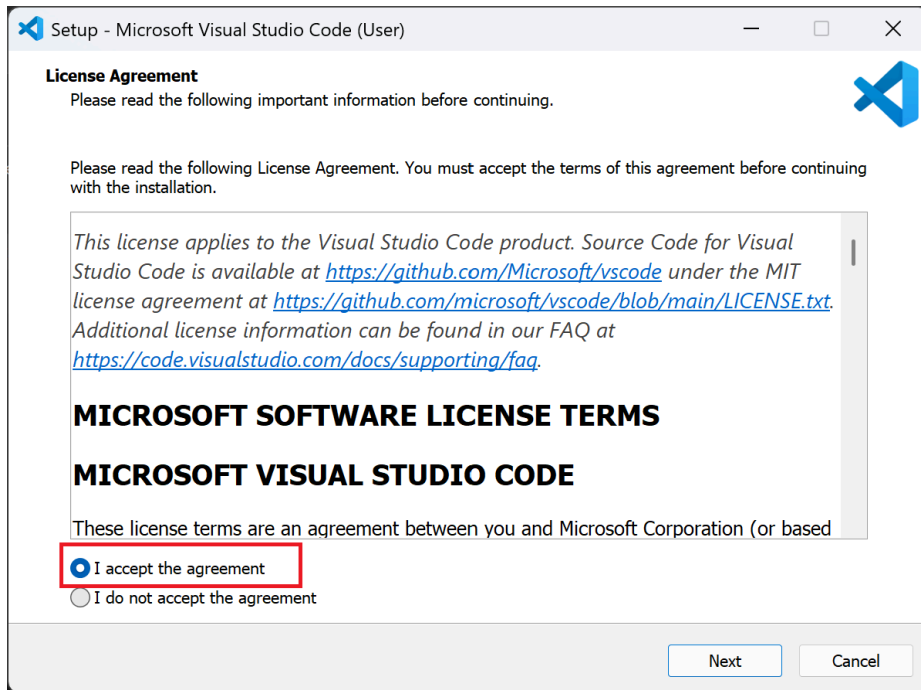

↓ .deb
Debian, Ubuntu

↓ .rpm
Red Hat, Fedora, SUSE

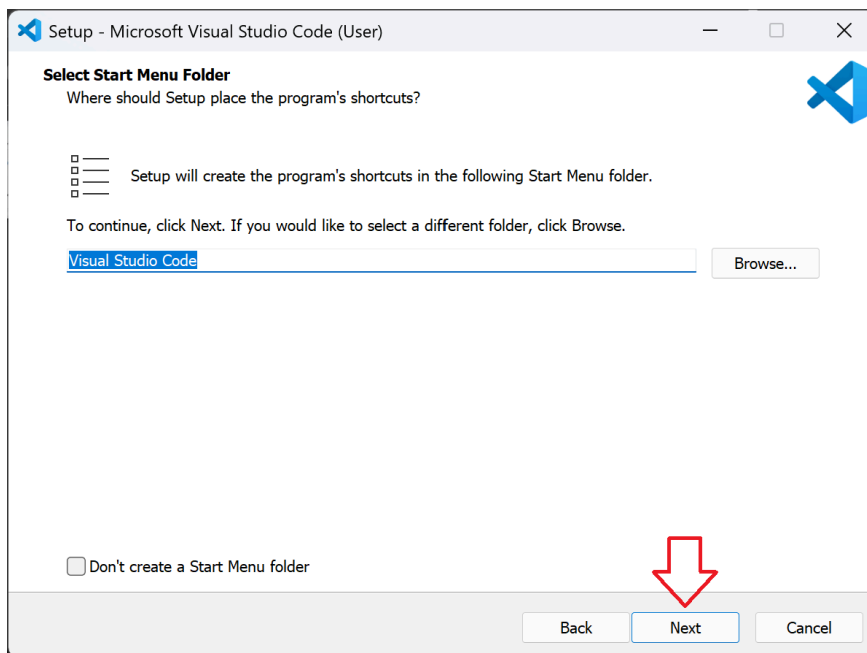

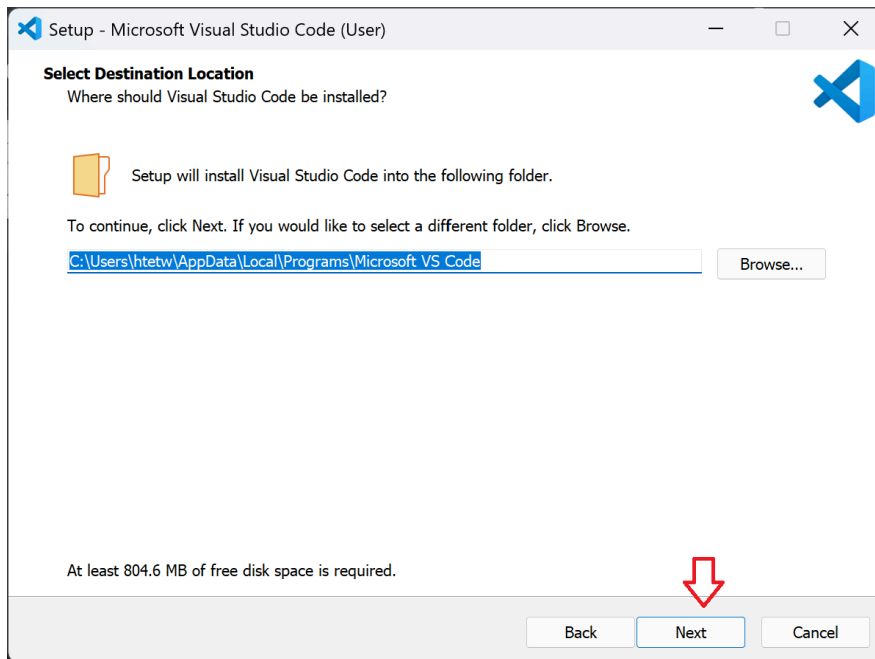

↓ Mac
macOS 10.15+

User Installer	x64 Arm64	.deb	x64 Arm32 Arm64	.zip	Intel chip Apple silicon Universal
System	x64 Arm64	.rpm	x64 Arm32 Arm64	CLI	Intel chip Apple silicon
Installer		.tar.gz	x64 Arm32 Arm64		
.zip	x64 Arm64	Snap	Snap Store		
CLI	x64 Arm64	CLI	x64 Arm32 Arm64		

2. Open the installer, click "I accept the agreement" then "Next"

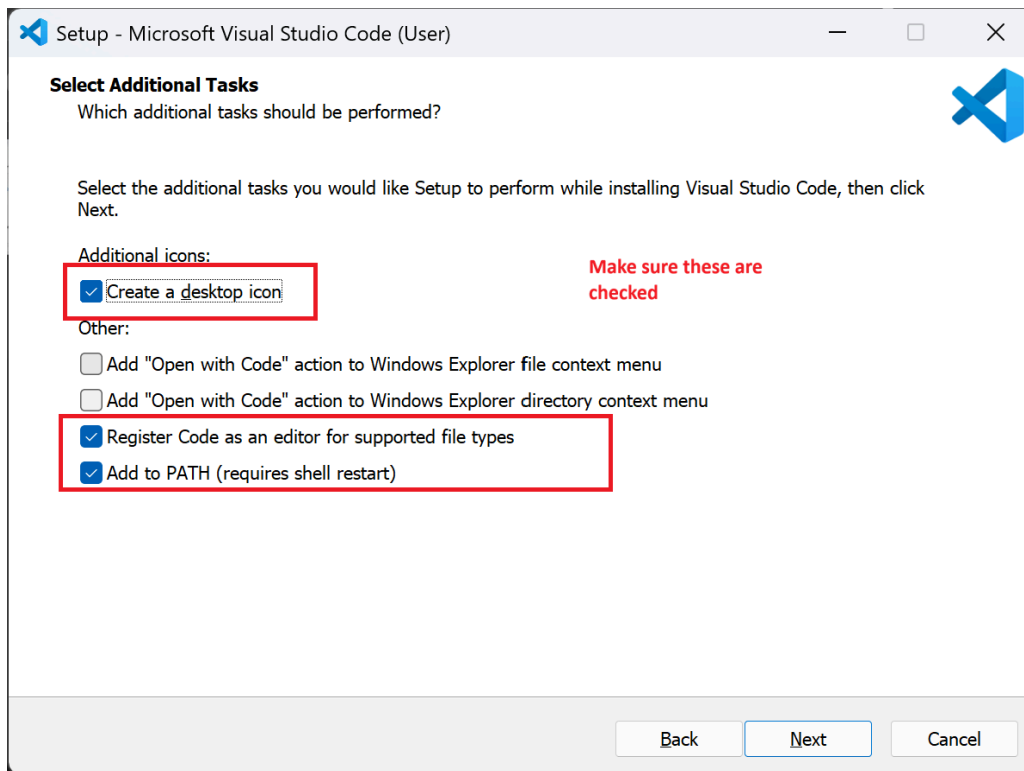

3. Click **Next** for the next two steps

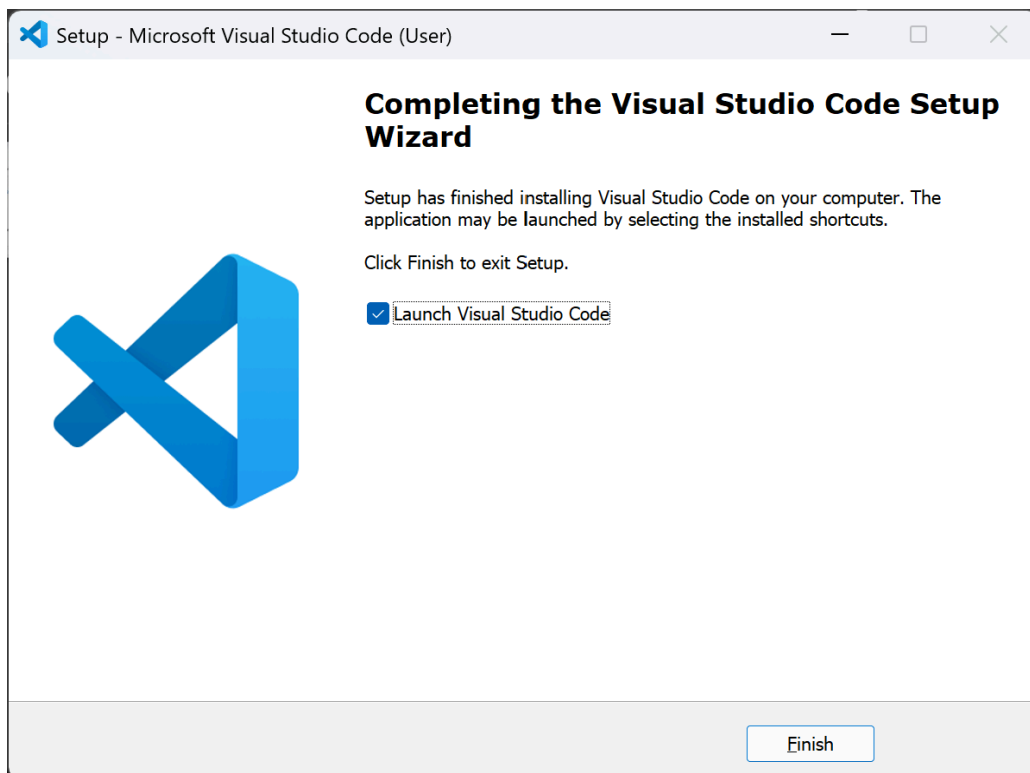

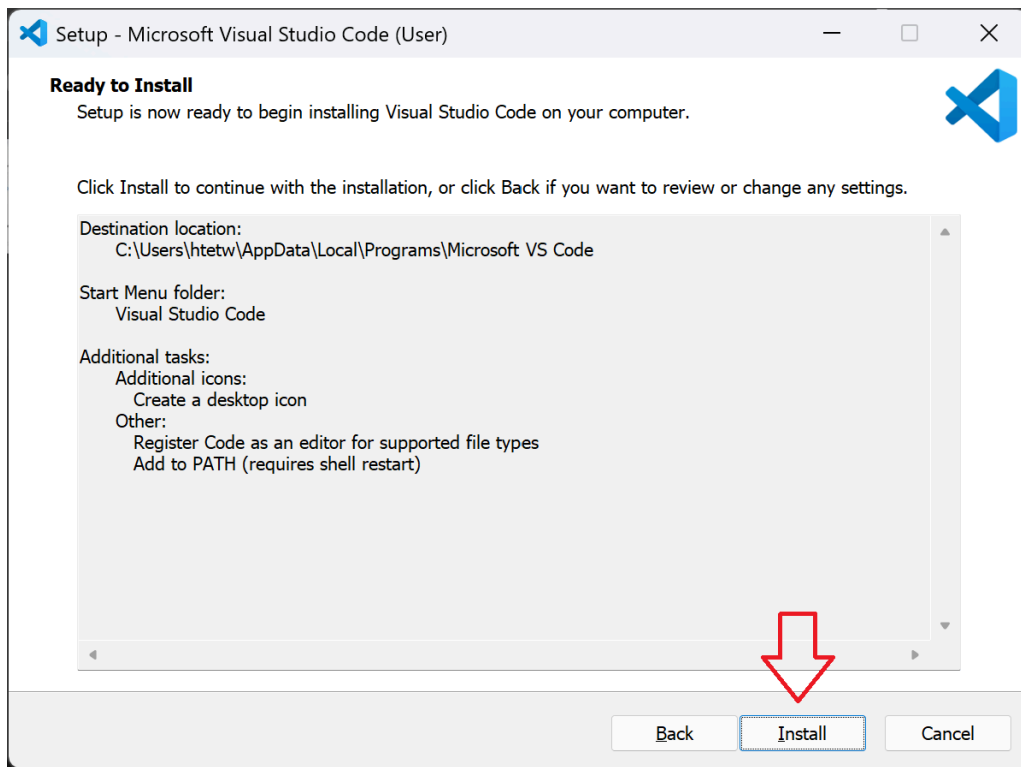

4. Click on “create a desktop icon” if you want VSC to be on your desktop. For **other**, leave “Register Code as an editor for supported file types” & “Add to PATH” (requires

shell restart), then "Next"

5. Click "Install"

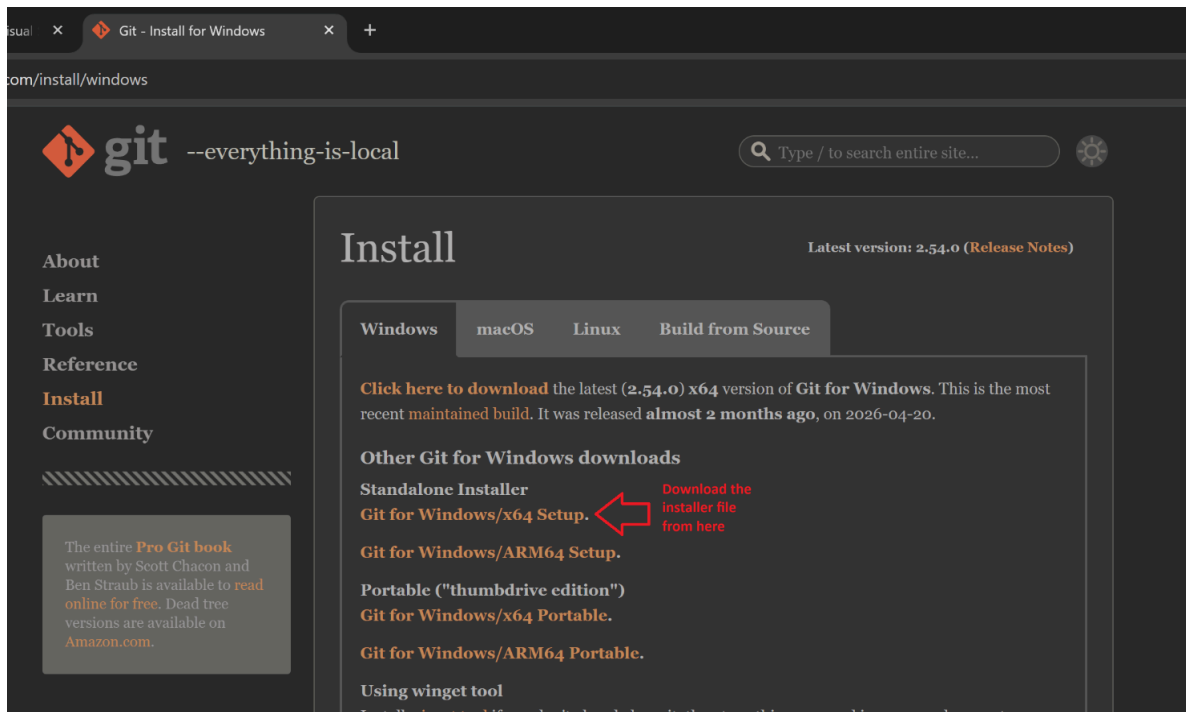

Installing Git

1. Check if Git is already installed
2. If Git is not installed, download the installer from

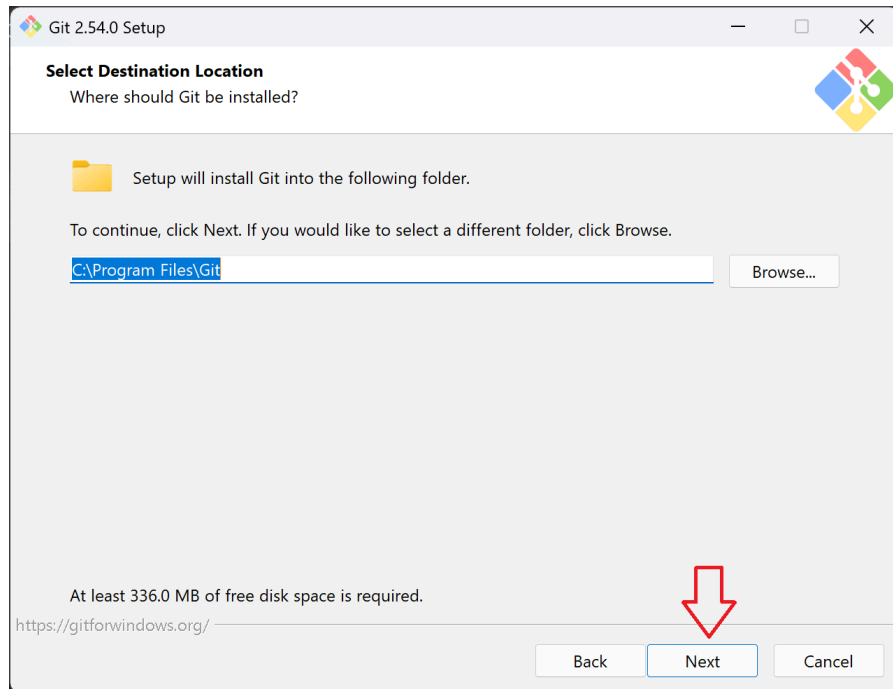

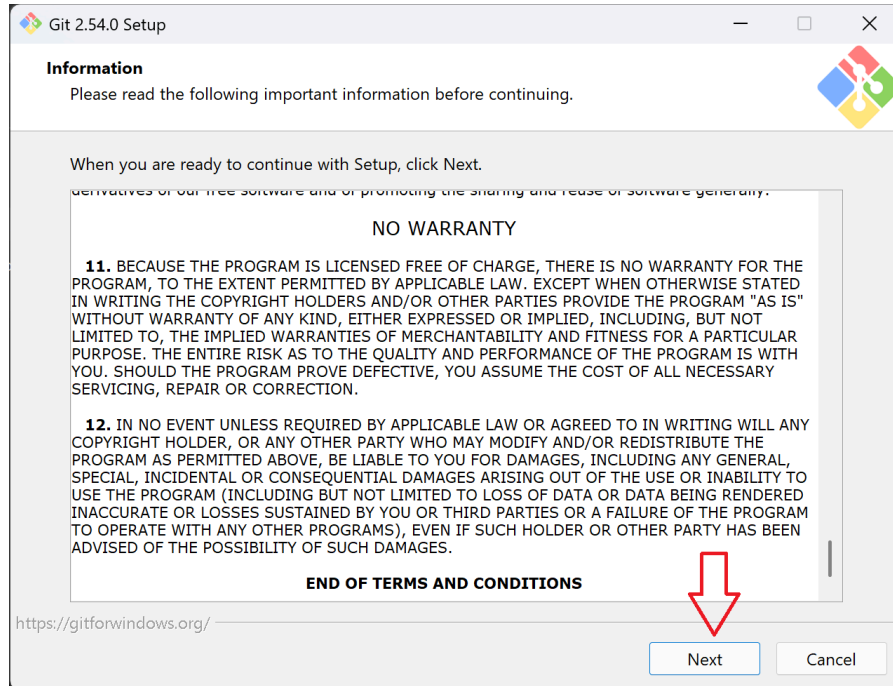

<https://git-scm.com/install/windows>

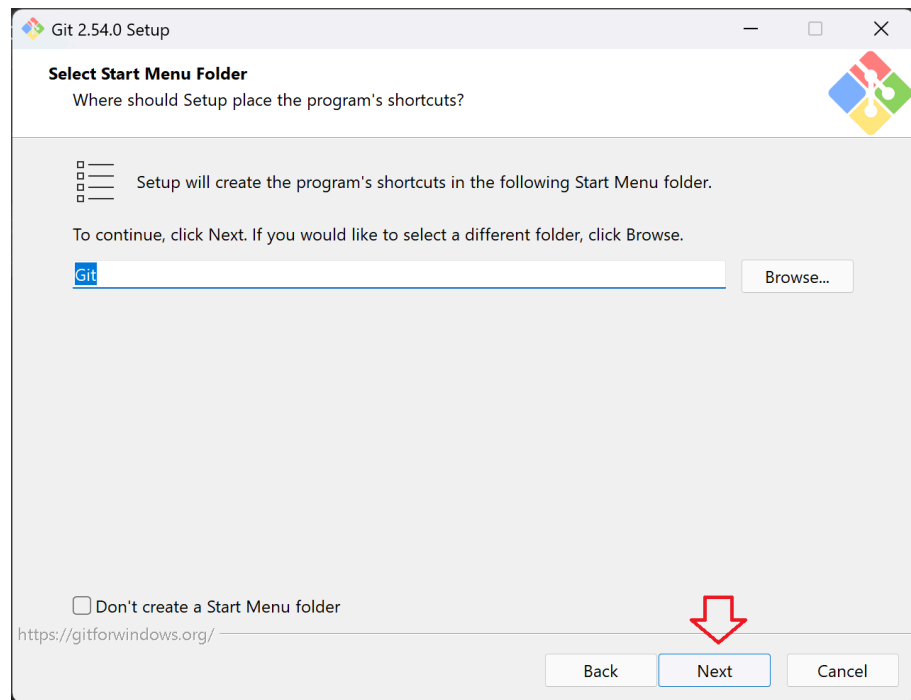

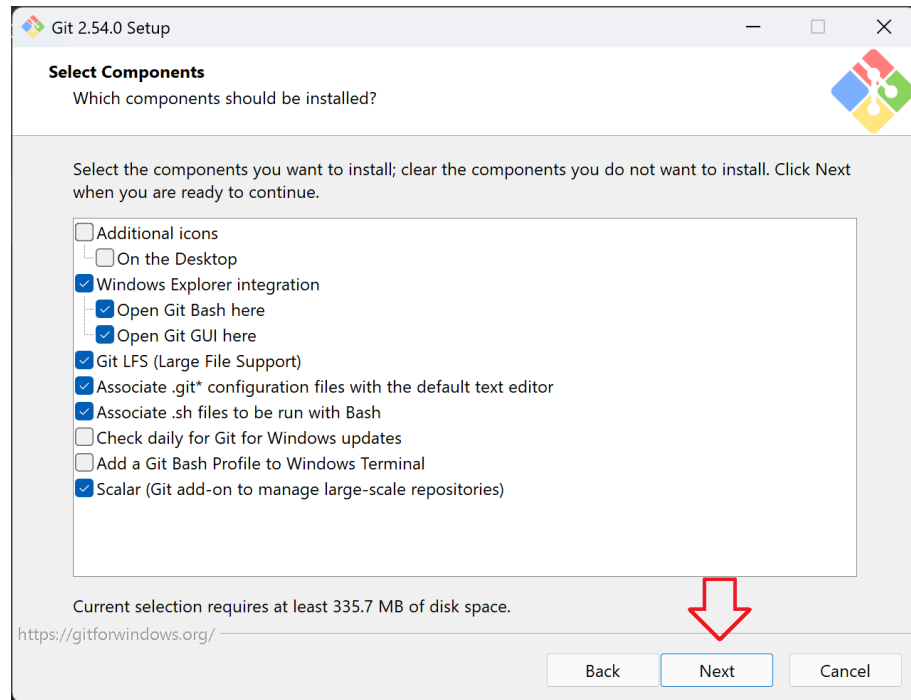

```
C:\Users\kohke>git -v
git version 2.44.0.windows.1

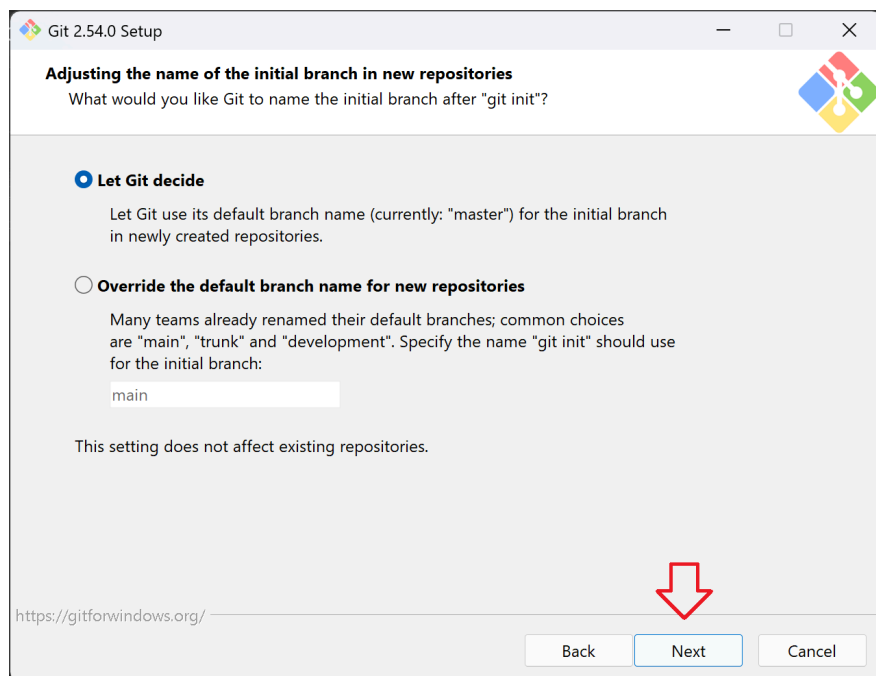

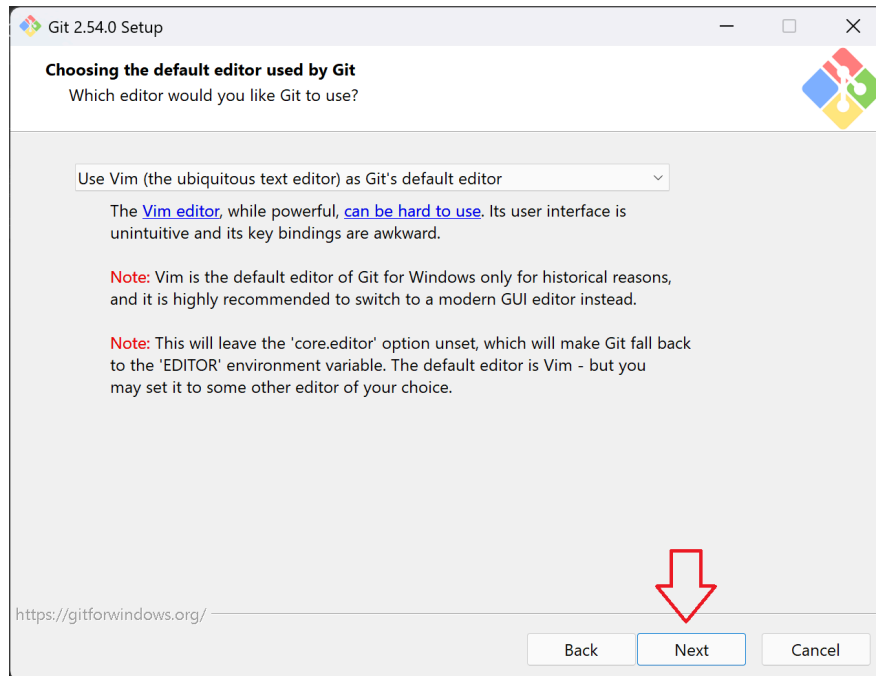

C:\Users\kohke>
```

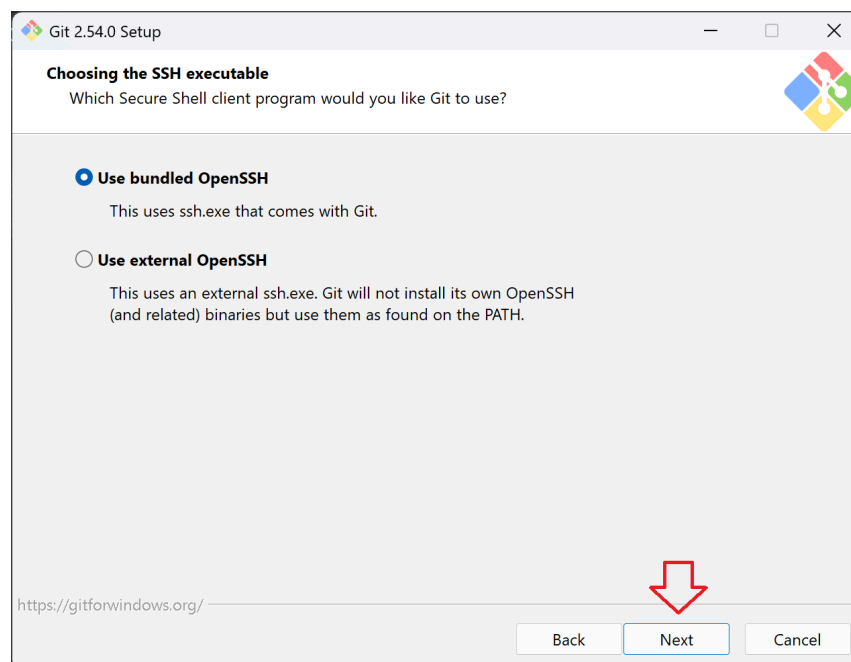

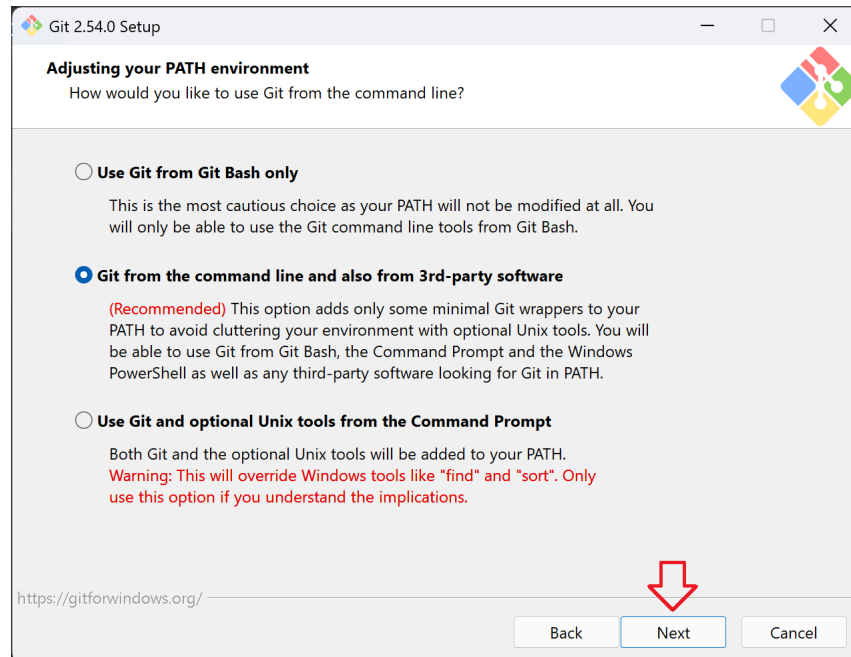

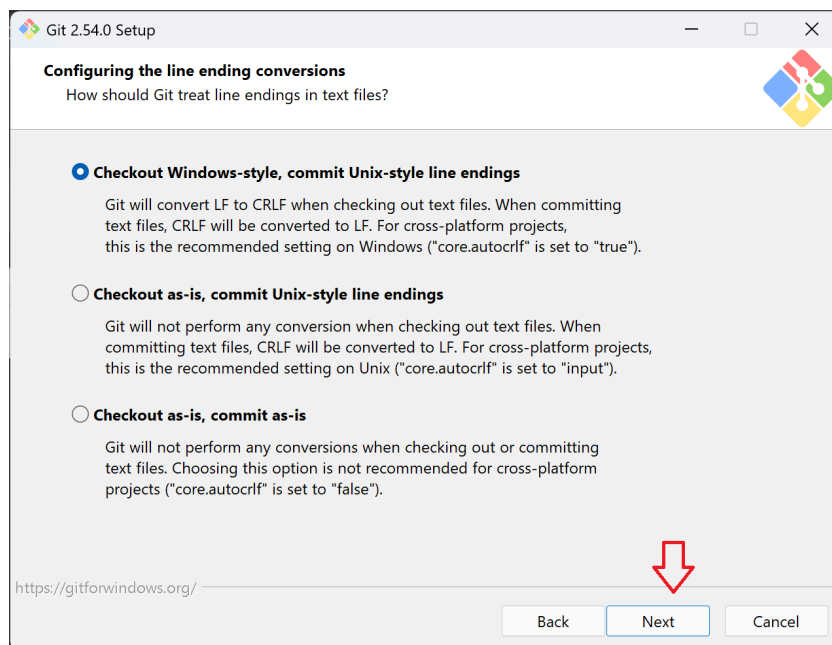

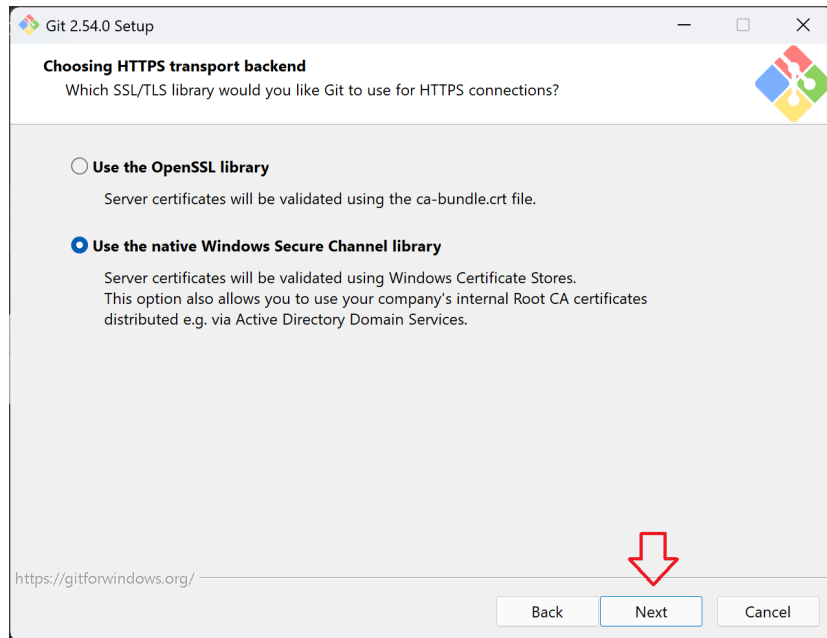

3. Set up Git through the installer
 - You can read through the options, but we recommend you to stick to the default options.

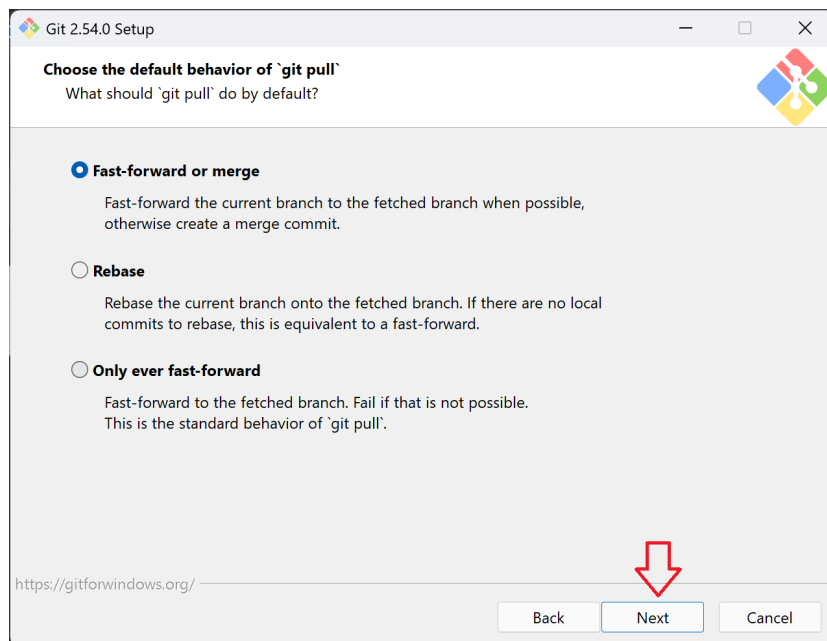

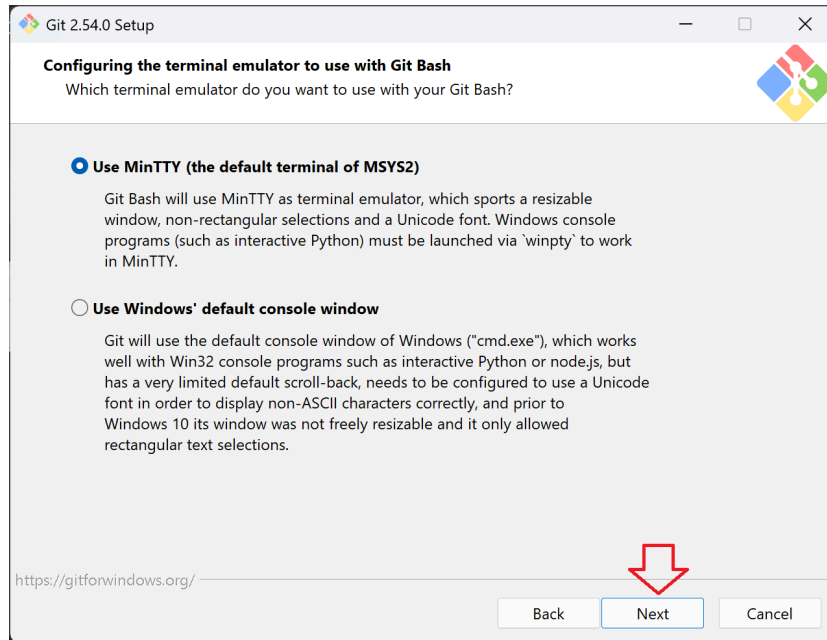

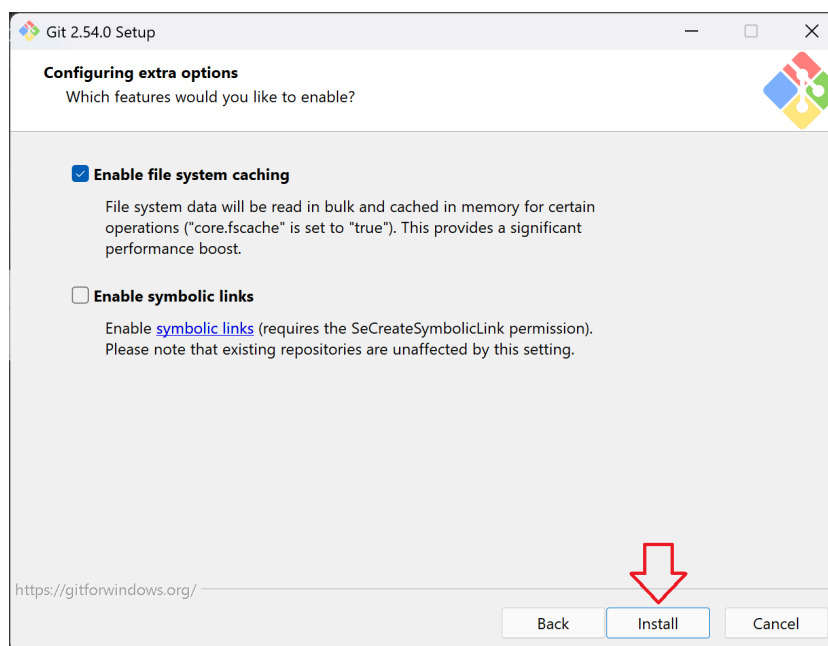

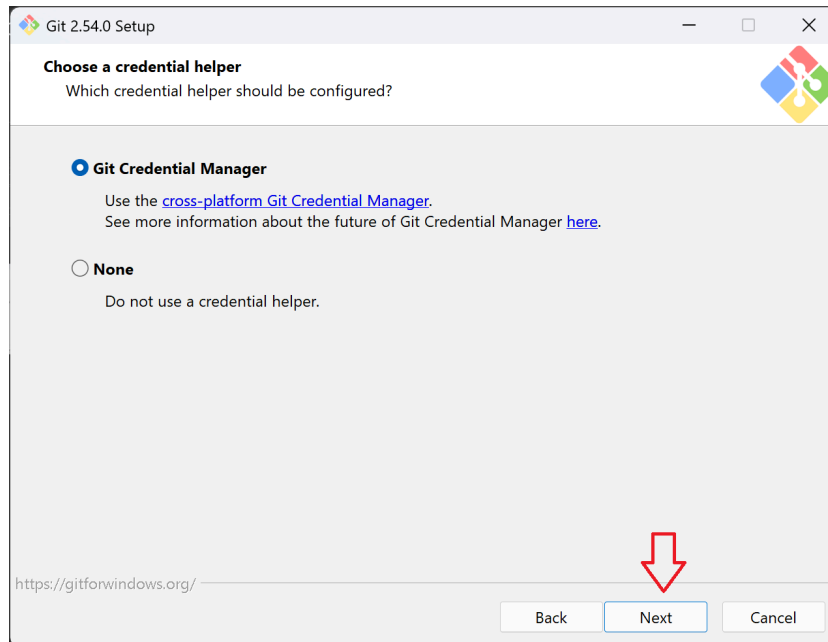

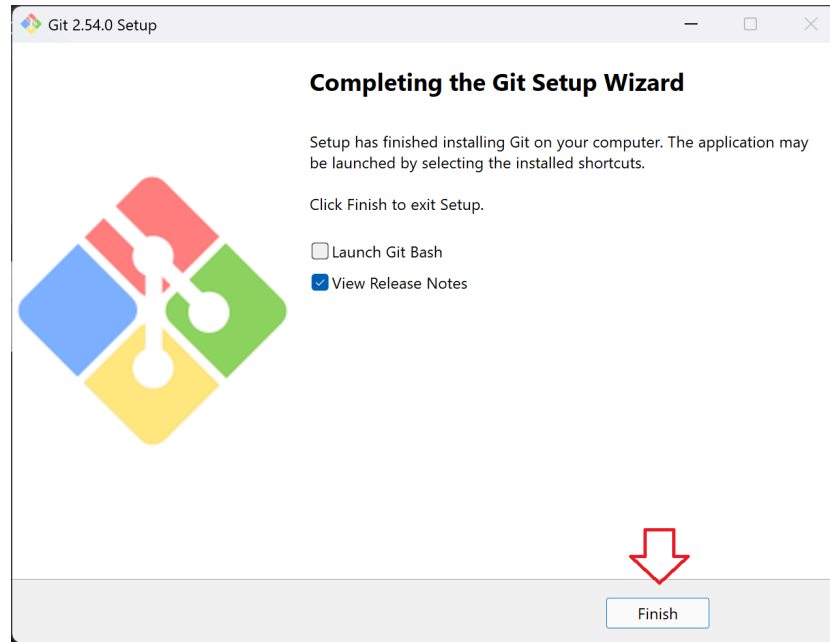

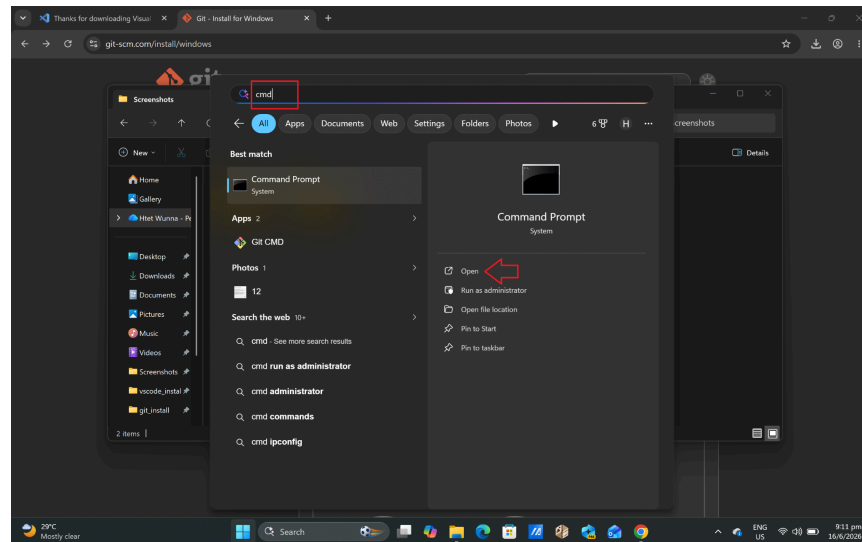

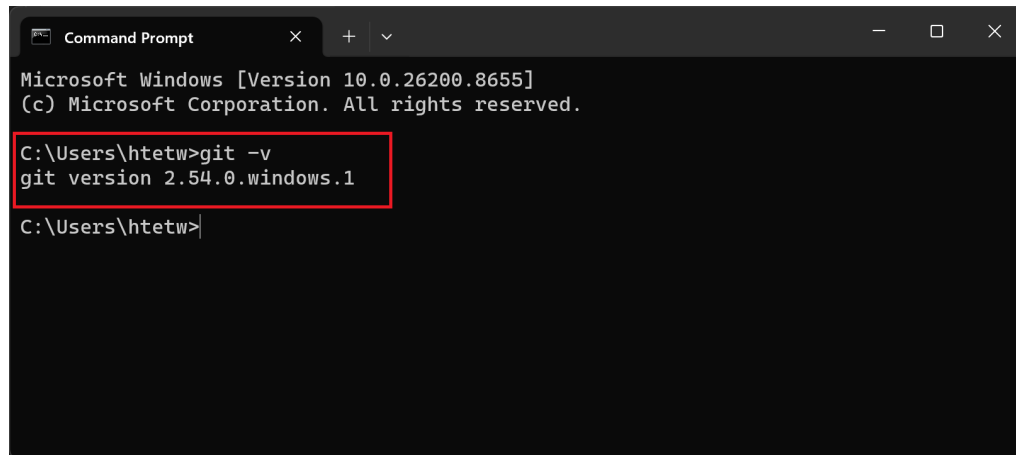

-
- Open up the cmd

- Run the `git -v` command to check.

```
Microsoft Windows [Version 10.0.26200.8655]
(c) Microsoft Corporation. All rights reserved.

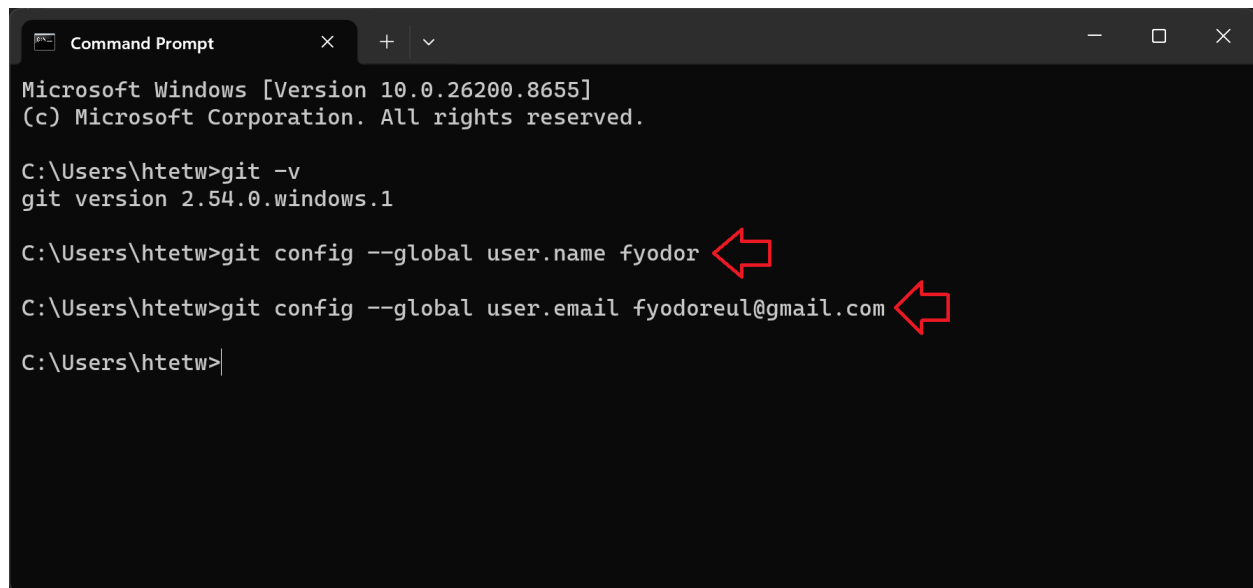

C:\Users\htetw>git -v
git version 2.54.0.windows.1

C:\Users\htetw>
```

Configuring Git and VSCode

1. In cmd, run the following commands

- a. `git config --global user.name <YOUR_NAME>`
- b. `git config --global user.email <YOUR_EMAIL>`

```
Microsoft Windows [Version 10.0.26200.8655]
(c) Microsoft Corporation. All rights reserved.

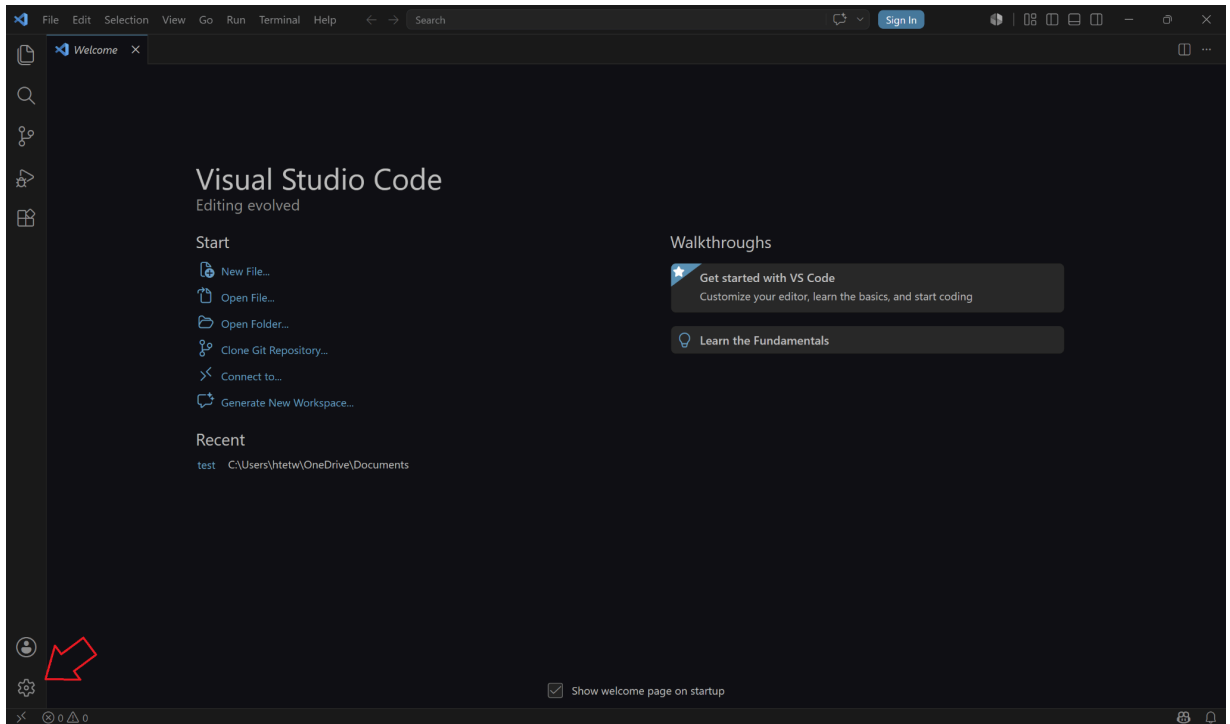

C:\Users\htetw>git -v
git version 2.54.0.windows.1

C:\Users\htetw>git config --global user.name fyodor
C:\Users\htetw>git config --global user.email fyodoreul@gmail.com
C:\Users\htetw>
```

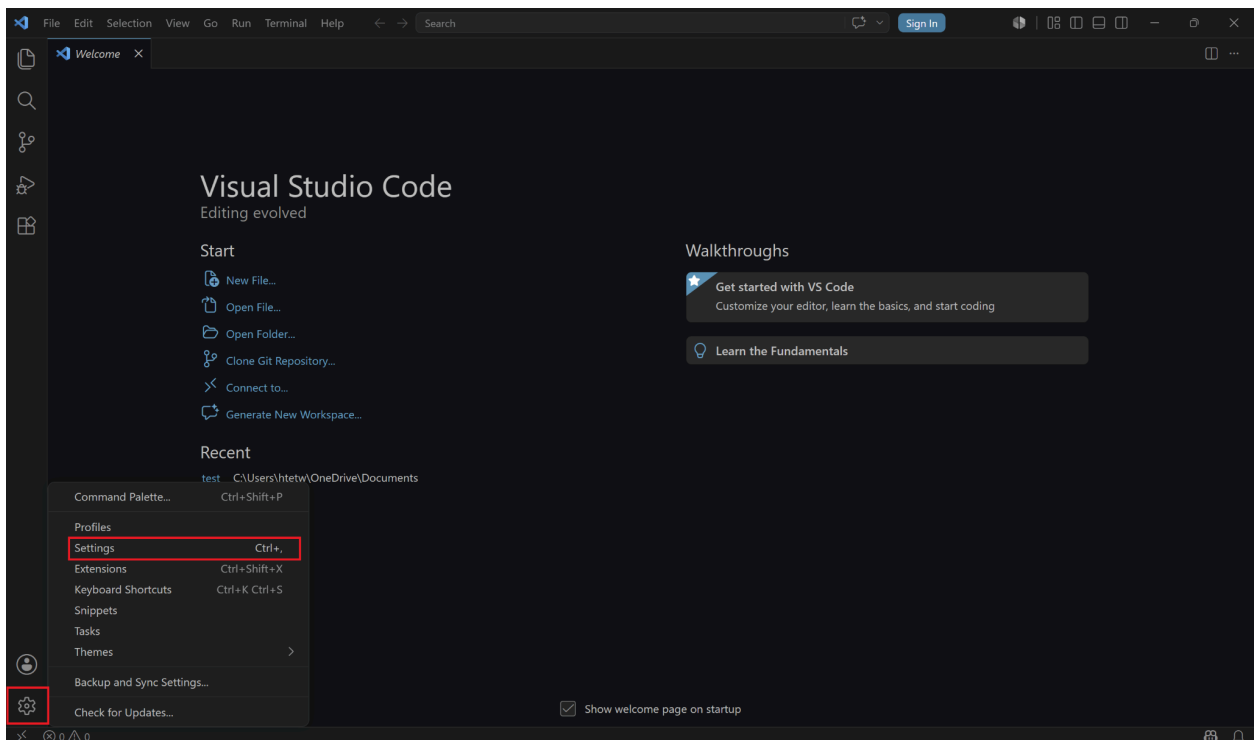

Technically, these usernames and emails can be anything. In fact, the email does actually have to exist. Git uses these username and email to display in the commit history. But still, we recommend you specify a meaningful name

and email that can be contacted. Let me repeat: it has nothing to do with your GitHub account.

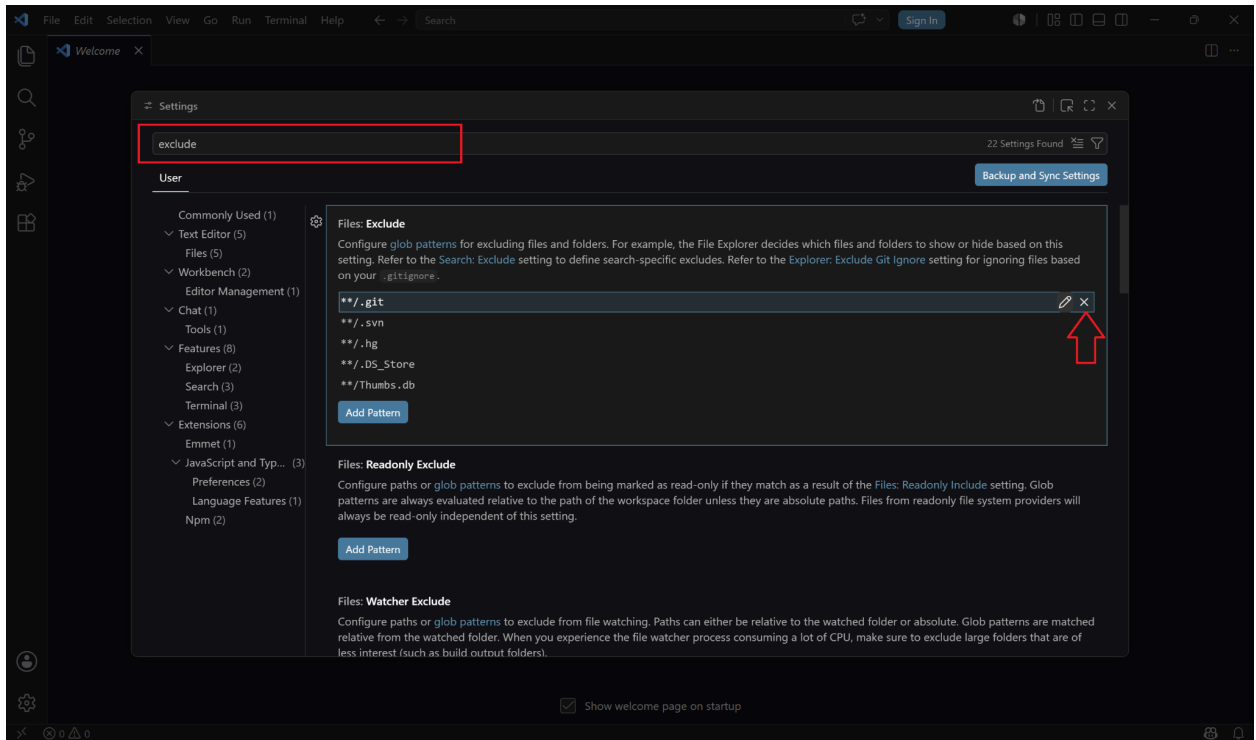

2. Open up VSCode and click the settings icon at the bottom left corner

3. Go to the **Settings**.

4. In the search bar, type “exclude” and remove the `**/.git` entry. This tells VSCode to stop hiding the `.git` folder in the file explorer.

If you reach this far, congrats. You are all set up. See u soon 🙌.
